There are concerns over the effects that offshore construction of windfarms will have on radar, which have been reinforced by recent trials which indicated degradation of cover near windfarms.

This lecture will outline some of the causes and effects of radar interaction with windfarms, the results of a number of ongoing trials and a range of options for mitigating windfarm impact on radar.

NOTE: The location for this lecture has changed from the Telford lecture theatre in Great Baddow to the Marconi Athletic and Social Club (MASC) on Beehive Lane:

Marconi Athletic and Social Club
Beehive Lane (B1009), Great Baddow,
Essex, CM2 9RX
Telephone number: 01245 269422
