

Crime Science

Using Science
in Crime Control

The

Barry Webb

Deputy Director, UCL Jill Dando Institute of Crime Science

From Sherlock Holmes to 'Silent Witness', the role of science and scientists in helping catch offenders more quickly and reliably is well recognised. Less well developed is their potential to help stop crime from happening in the first place. More attention to the opportunities that tempt people into crime reveals scope for scientists to help create products, environments and systems that make crime harder, riskier or less rewarding to commit.
